

Conceptualizing Psychopathy Using the CAPP

Formulation Over Numbers

Stephen D. Hart, PhD

Clinical Questions

- What is the nature and severity of the patient's psychopathic symptomatology?
- Does the patient currently suffer from psychopathy?

Clinical Questions

- Was this patient's past violence due to psychopathy?
- Has the patient's violence risk changed due to changes in psychopathic symptomatology?

Clinical Questions

- What should be the focus of treatment for psychopathy for this patient?
- What type of treatment for psychopathy is most appropriate for this patient?

Formulation: PCL-R

PCL-R TOTAL SCORE = 32

Problems: PCL-R

- Its content is not ideal
 - Some important features of psychopathy are not captured well or even excluded
 - Some features of psychopathy of questionable importance are included

Problems: PCL-R

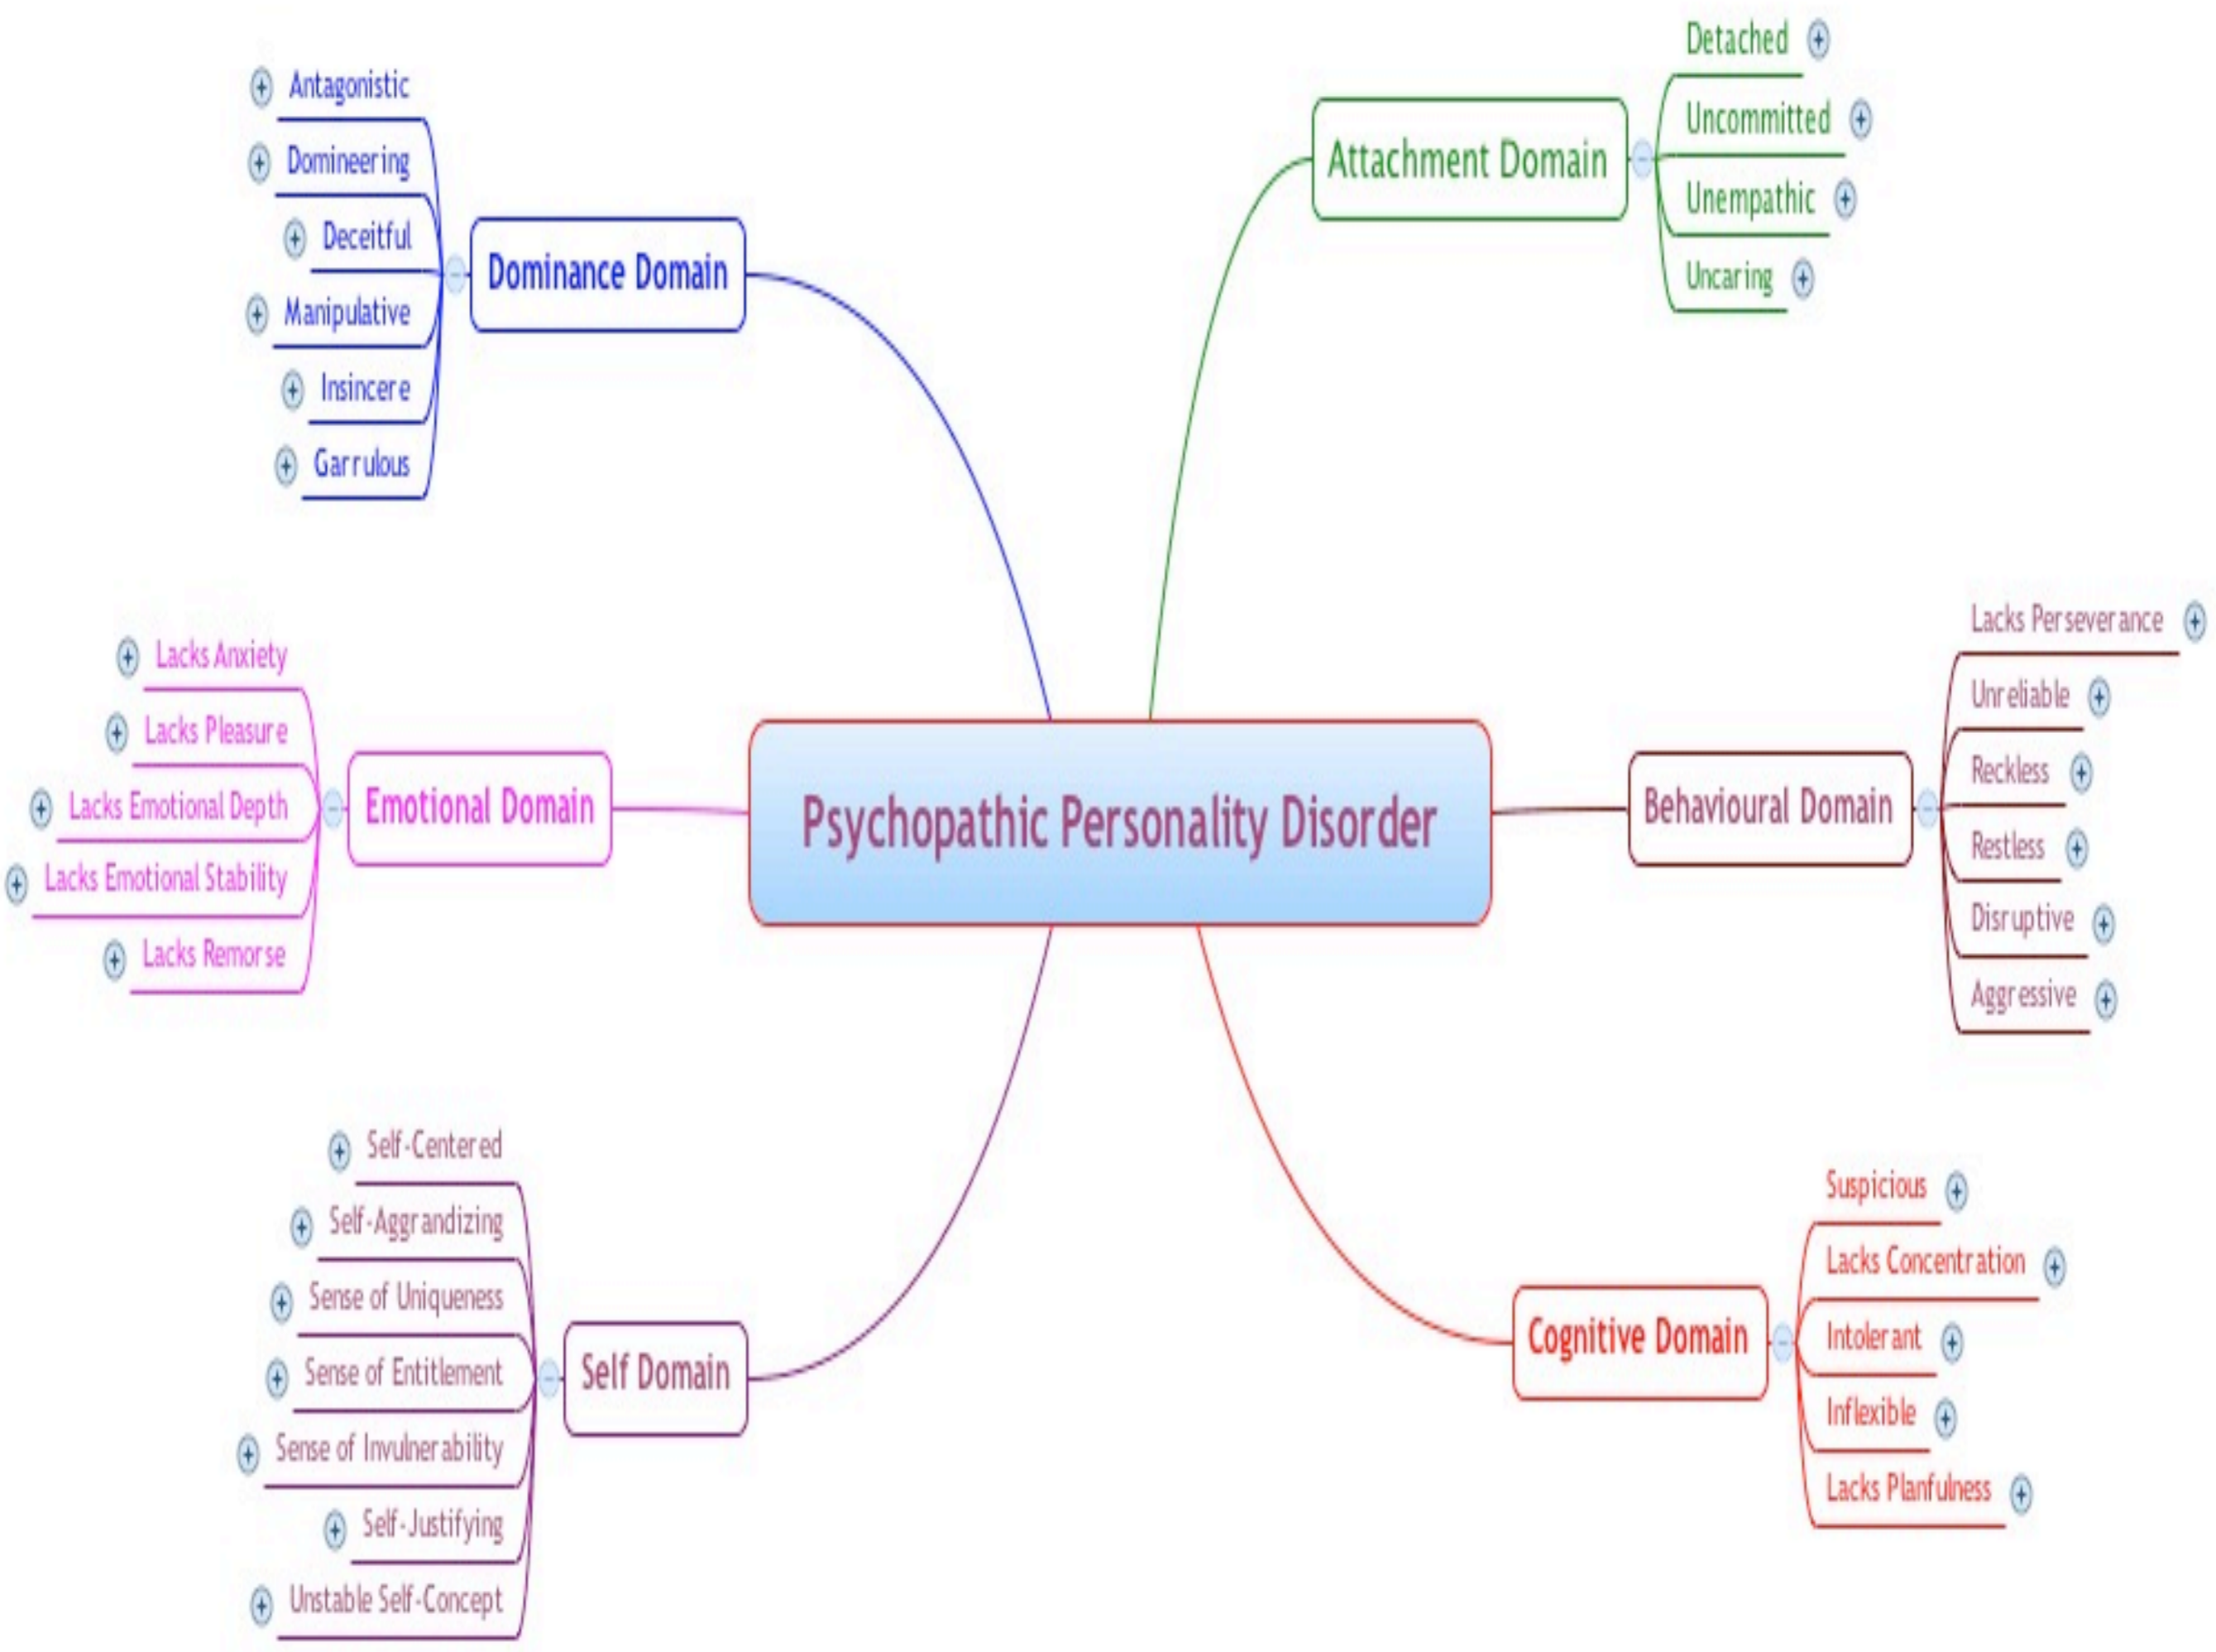

- Its format makes it insensitive to change
 - Focus is on lifetime prevalence
 - Many item definitions are anchored in low-frequency, situation-specific behaviors

Problems: PCL-R

- Its item ratings are psychometrically sound but clinically irrelevant
- Rating format confounds nature and severity of symptoms
- Adding ratings to create scores assumes the items are interchangeable

CAPP

- *A conceptual model* intended to provide a definition of psychopathy that is
 - Explicit
 - Comprehensive
 - Lexical

Psychopathic Personality Disorder

Dominance Domain

- + Antagonistic
- + Domineering
- + Deceitful
- + Manipulative
- + Insincere
- + Garrulous

Attachment Domain

- + Detached
- + Uncommitted
- + Unempathic
- + Uncaring

Emotional Domain

- + Lacks Anxiety
- + Lacks Pleasure
- + Lacks Emotional Depth
- + Lacks Emotional Stability
- + Lacks Remorse

Behavioural Domain

- + Lacks Perseverance
- + Unreliable
- + Reckless
- + Restless
- + Disruptive
- + Aggressive

Self Domain

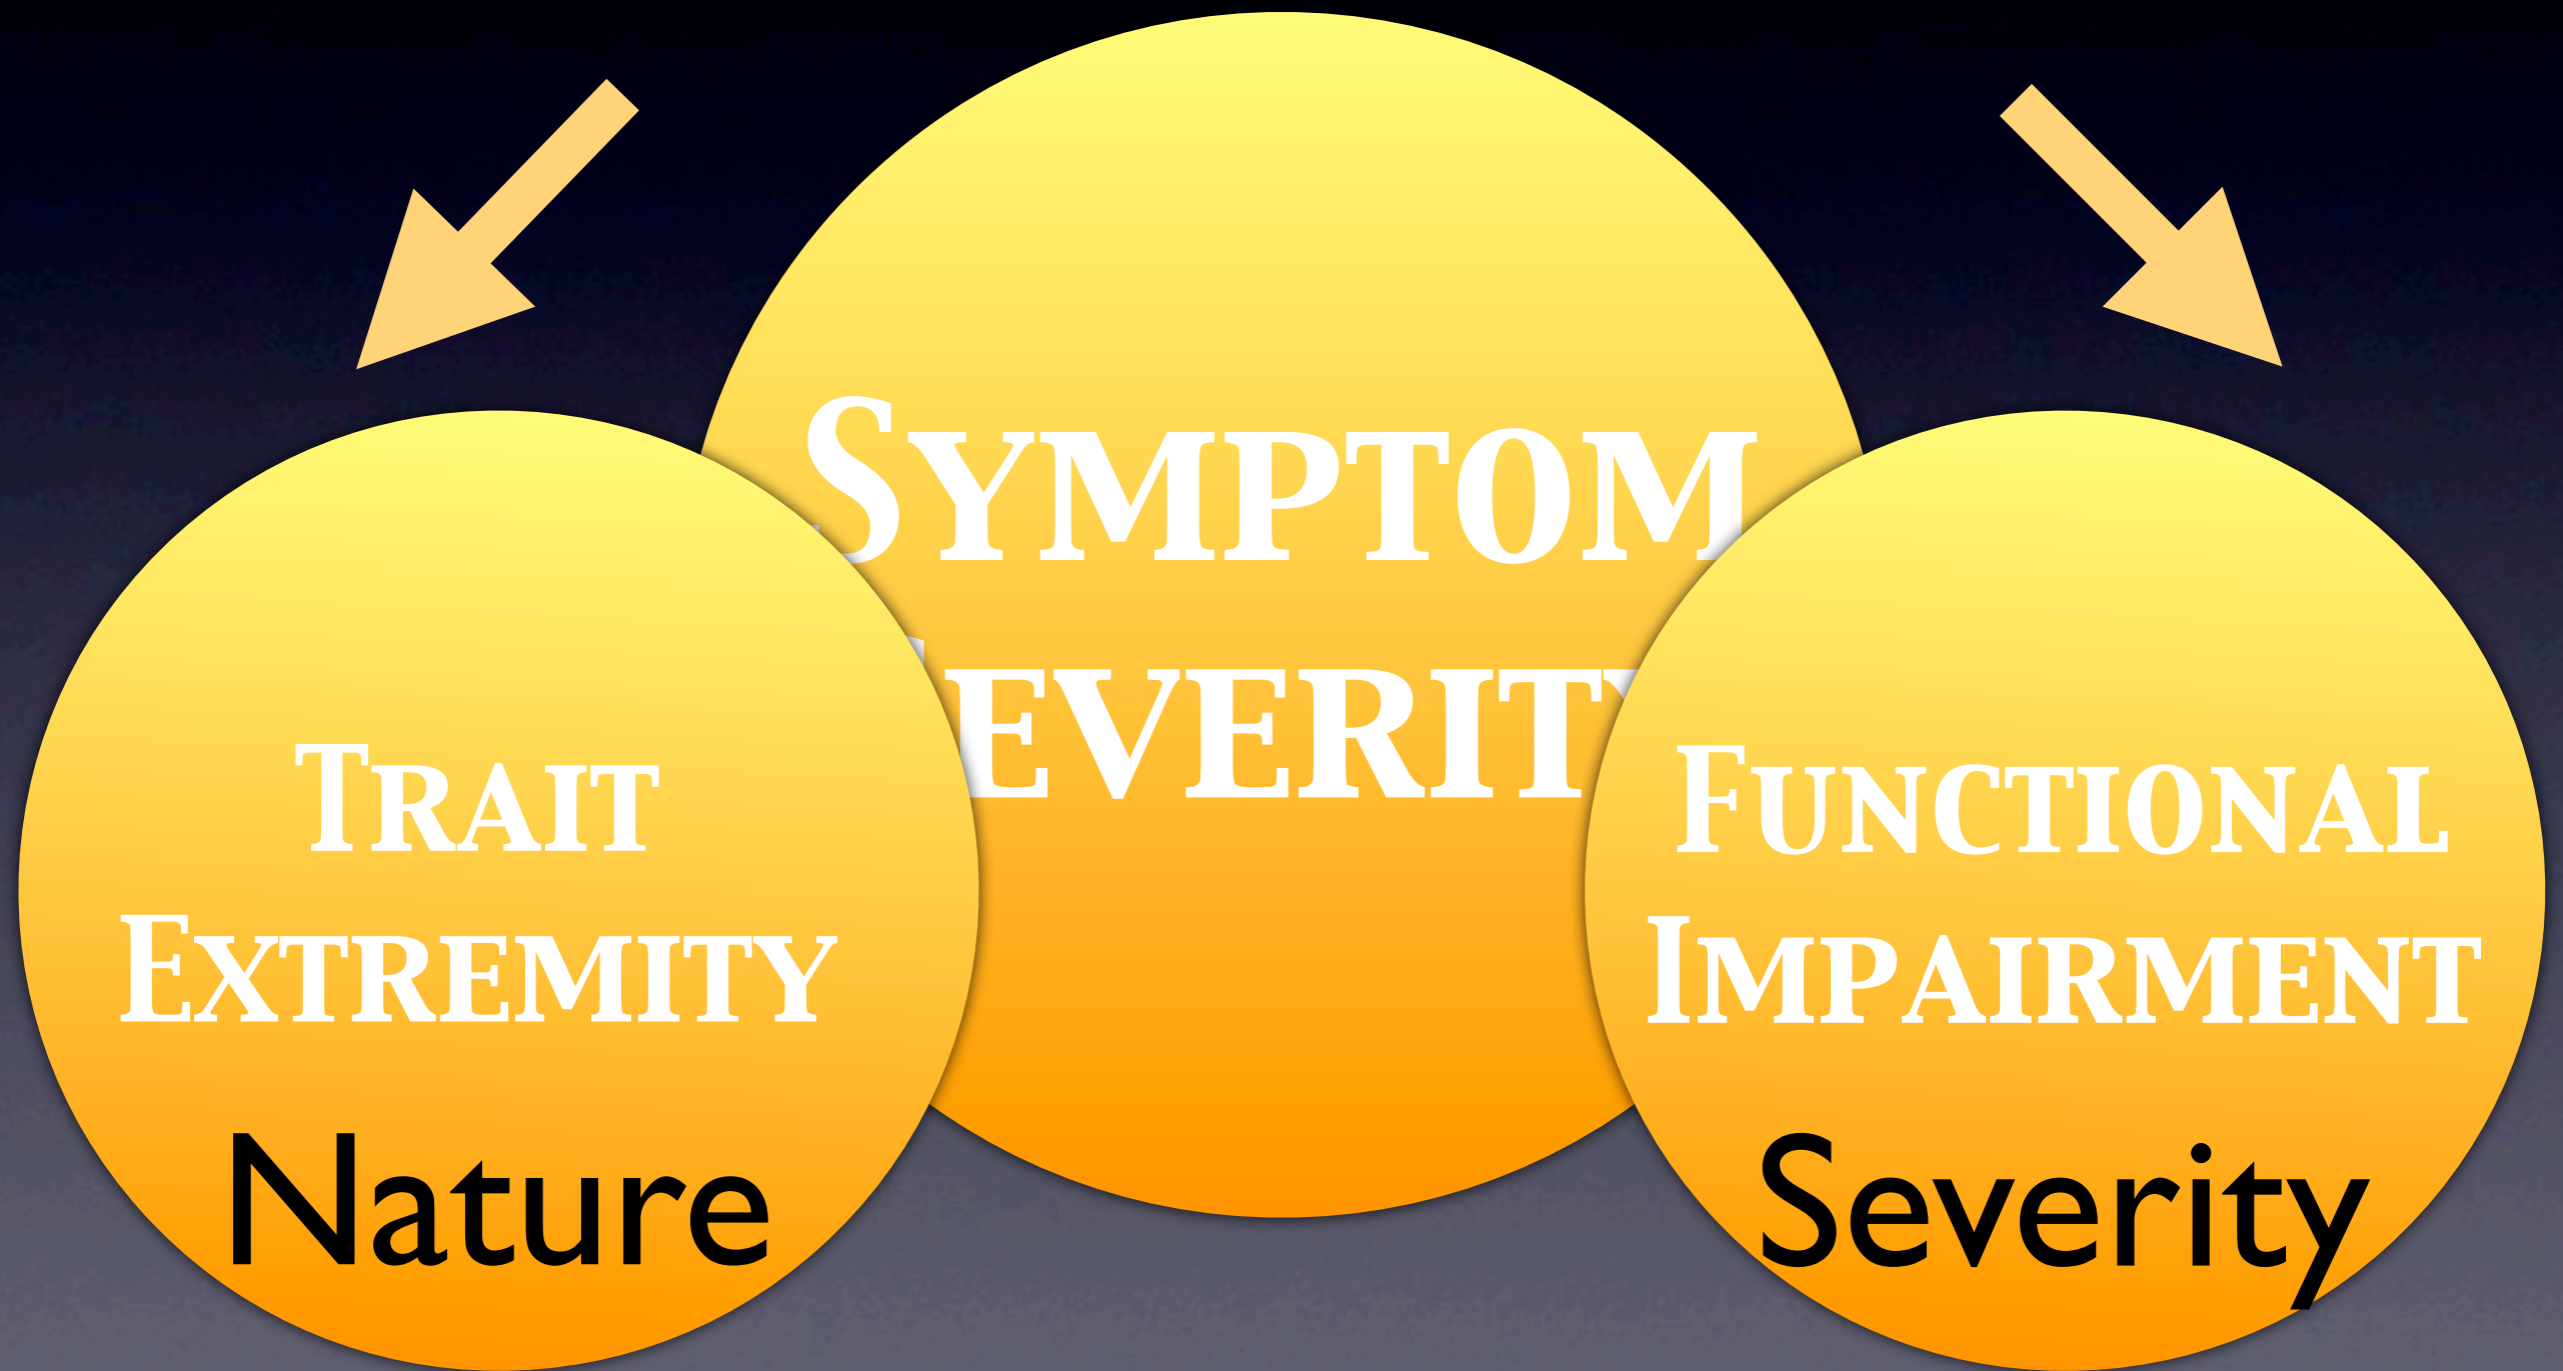

- + Self-Centered
- + Self-Aggrandizing
- + Sense of Uniqueness
- + Sense of Entitlement
- + Sense of Invulnerability
- + Self-Justifying
- + Unstable Self-Concept

Cognitive Domain

- + Suspicious
- + Lacks Concentration
- + Intolerant
- + Inflexible
- + Lacks Planfulness

CAPP-IRS

- A rating scale based on the CAPP that permits
 - Ratings of overall symptom severity, plus separate ratings of trait extremity and functional impairment
 - Flexible timeframe for ratings
